

ECOVINEGOALS

ECOlogical VINEyard GOvernance Activities for Landscape's Strategies

This project is supported by the Interreg ADRION Programme funded under the European Regional Development Fund and IPA II fund.

ECOVINEGOALS tackles the challenge of intensive viticulture systems and their negative effects on soil, water, air quality, biodiversity and landscape, throughout the Adriatic-Ionian region. By developing innovative tools and strategies, enhancing stakeholder capacities in participatory local governance, and encouraging transnational cooperation, the project promotes the agro-ecological transition of viticulture management towards low input and low emission systems.
